Risk Classification

The Fund may be suitable for investors looking for a source of income through exposure to global investment-grade fixed-rate debt markets and have an investment horizon of medium to long term. The **underlying fund** uses optimizing techniques to achieve a similar return to its Index. These may include the strategic selection of certain securities that make up the Index or other FI securities which provide similar performance to certain constituent securities. Benchmark is The Bloomberg Barclays Global Aggregate Bond Index

Market Commentary

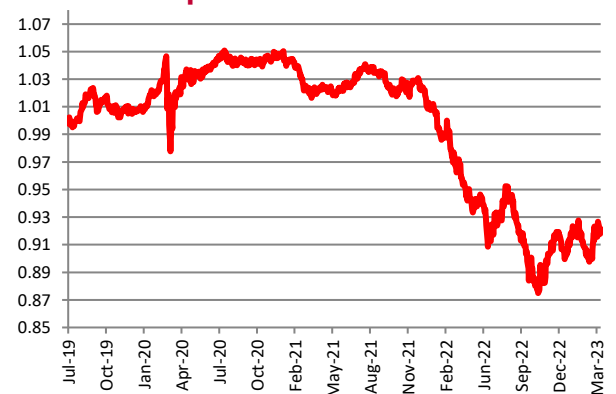

Global fixed income markets returned positive for the month amid expectations of easing policy from global central banks following the bank failures of US regional banks that rattled markets. Officials swiftly stepped in and provided support to help bolster stability in the sector. Despite the volatile backdrop, global central banks hiked their interest rates as officials remained focused on to bring inflation back to target. The US Federal Reserve and European Central Bank raised its interest rates by 25 and 50 basis points, respectively.

US Treasury yield curve flattened as the 2-year, 10-year, and 30-year yields declined by 79, 45, and 47 basis points, ending the month at 4.03%, 3.47% and 3.65%, respectively. Riskier fixed income assets underperformed comparable government bonds, amid concerns of a higher recession risk following the turmoil in the banking sector. Corporate credit spreads widened across sectors as spreads of US investment-grade, US high-yield and emerging-market fixed income widened by 14, 40 and 34 basis points, respectively.

GEOGRAPHIC BREAKDOWN (%)

Geographic exposure relates principally to the domicile of the issuers of the securities held in the product, added together and then expressed as a percentage of the product's total holdings. However, in some instances it can reflect the location where the issuer of the securities carries out much of their business.

Risk Warning: Past performance is not indicative of future results. Our investment management services relate to a variety of investments, each of which can fluctuate in value. The value of portfolios we manage may fall as well as rise, and the investor may not get back the full amount originally invested. The investment risks vary between different types of instruments. For example, for investments involving exposure to a currency other than that in which the portfolio is denominated, changes in the rate of exchange may cause the value of investments, and consequently the value of the portfolio, to go up or down. In the case of a higher volatility portfolio the loss on realization or cancellation may be very high (including total loss of investment), as the value of such an investment may fall suddenly and substantially. In making an investment decision, prospective investors must rely on their own examination of the merits and risks involved. **Disclaimer:** Unless otherwise noted, all information contained herein is sourced from BPI AIA* internal data.
