## BPI-Philam Growth Fund 2 Market Commentary

The Philippine Stock Exchange index (PSEI) suffered a 1.8% decline in July following a myriad of domestic and international macro economic developments. The PSEI started off strong, on pace to what it seemed like a breakout of the 6,500 level until overnight secondary share placements from two index heavyweights SM and SMPH pulled the market back. Corporate earnings also started to come out with mixed results. Meanwhile, on the international front, the US and the Philippines reached a tariff deal where Philippine exports to US will be levied by 19 while the US being charged with zero. Towards the end of the month, the benchmark index slumped even further as the peso weakened back to the 58-level following the US dollar's strength. The US Federal Reserve held its FOMC meeting where they decided to keep interest rates unchanged. After which, expectations of further rate cuts were somewhat trimmed following several favorable US economic data such as US Personal Consumption Expenditure still recording above targets and strong 2nd quarter US GDP at 3.0% quarter on quarter. The PSEI breached below the 6,300 level to close at 6,252.73% in July.

In terms of trading activity, the PSEI recorded an Average Daily Turnover of Php6.5 billion in July, or 1.07% lower on a month-on-month basis. Meanwhile, foreigners are still net sellers for the fourth straight month at US 29 million, but with lower participation at 47%.

On a per stock basis, the top three index gainers for the month include PGOLD (+11.11%), ICT (+9.00%) and EMI (+8.58%). Meanwhile, the bottom three performers were: BLOOM (-20.55%), AGI (-14.63%) and AEV (-9.17%).

**Risk Warning:** Past performance is not indicative of future results. Our investment management services relate to a variety of investments, each of which can fluctuate in value. The value of portfolios we manage may fall as well as rise, and the investor may not get back the full amount originally invested. The investment risks vary between different types of instruments. For example, for investments involving exposure to a currency other than that in which the portfolio is denominated, changes in the rate of exchange may cause the value of investments, and consequently the value of the portfolio, to go up or down. In the case of a higher volatility portfolio the loss on realization or cancellation may be very high (including total loss of investment), as the value of such an investment may fall suddenly and substantially. In making an investment decision, prospective investors must rely on their own examination of the merits and risks involved. **Disclaimer:** Unless otherwise noted, all information contained herein is sourced from BPI AIA\* internal data.
