Risk Classification

The Fund is suitable for investors who take medium- to long-term views. The Fund's yield, net asset value and total return may fluctuate as a result of interest rate and currency movements and the changes in the credit quality of the investments. On redemption of shares, an investor may receive an amount less than the original amount of the investment. Liquidity risk also needs to be taken into account.

BPI – Philam US Dollar Bond Fund 2 Market Commentary

The JP Morgan Asia Credit Index (JACI) Philippines gained 0.39% in December, despite a rise in Philippine dollar bond yields. Most of the yield curve steepening occurred in the mid-tenor segment, mirroring trends in U.S. Treasuries.

Global backdrop: Cooling U.S. inflation and mixed labor data provided the Federal Reserve room to ease policy. On December 10, the Fed cut rates by 25 basis points, signaling a more accommodative stance. However, strong demand at mid-month U.S. Treasury auctions pushed long-term yields higher, resulting in a steeper curve, short-term yields declined while long-term yields rose.

Domestic macro: Philippine inflation eased to 1.5% in November, remaining below the government's 2–4% target range and down from October's 1.7%. The Bangko Sentral ng Pilipinas (BSP) maintained a dovish tone, reinforcing expectations for further policy easing after its December rate cut. The policy rate now stands at 4.5%, with markets anticipating a potential move toward 4.0% in 2026.

Risk Warning: Past performance is not indicative of future results. Our investment management services relate to a variety of investments, each of which can fluctuate in value. The value of portfolios we manage may fall as well as rise, and the investor may not get back the full amount originally invested. The investment risks vary between different types of instruments. For example, for investments involving exposure to a currency other than that in which the portfolio is denominated, changes in the rate of exchange may cause the value of investments, and consequently the value of the portfolio, to go up or down. In the case of a higher volatility portfolio the loss on realization or cancellation may be very high (including total loss of investment), as the value of such an investment may fall suddenly and substantially. In making an investment decision, prospective investors must rely on their own examination of the merits and risks involved. **Disclaimer:** Unless otherwise noted, all information contained herein is sourced from BPI AIA* internal data.
