## Risk Classification

The Fund is suitable for investors who take medium- to long-term views. The Fund's yield, net asset value and total return may fluctuate as a result of interest rate and currency movements and the changes in the credit quality of the investments. On redemption of shares, an investor may receive an amount less than the original amount of the investment. Liquidity risk also needs to be taken into account.

## BPI – Philam US Dollar Bond Fund 2 Market Commentary

The JP Morgan Asia Credit Index (JACI) Philippines returned 1.59% in March as Philippine dollar denominated bonds tracked movements in US Treasuries.

Global bonds rallied in March as investors adopted a flight-to-safety stance amid concerns over the health of the banking sector. The US Federal Reserve responded swiftly to the closure of Silicon Valley Bank, ensuring depositors that all their deposits would be protected. Central banks across the globe likewise reiterated their commitment to provide liquidity and stabilize markets as needed. During its March Federal Open Market Committee (FOMC) meeting, the Fed opted to hike rates by another 25 basis points, citing the continued need to cool inflation even as the new challenge of maintaining financial stability emerged. Both US CPI and employment data released during the month continued to support the case for further policy tightening. For the month, the 10-year US Treasury yield fell by 45 basis points to close at 3.47%.

**Risk Warning:** Past performance is not indicative of future results. Our investment management services relate to a variety of investments, each of which can fluctuate in value. The value of portfolios we manage may fall as well as rise, and the investor may not get back the full amount originally invested. The investment risks vary between different types of instruments. For example, for investments involving exposure to a currency other than that in which the portfolio is denominated, changes in the rate of exchange may cause the value of investments, and consequently the value of the portfolio, to go up or down. In the case of a higher volatility portfolio the loss on realization or cancellation may be very high (including total loss of investment), as the value of such an investment may fall suddenly and substantially. In making an investment decision, prospective investors must rely on their own examination of the merits and risks involved. **Disclaimer:** Unless otherwise noted, all information contained herein is sourced from BPI AIA\* internal data.
