Fund Size	USD 56.78 Million
Fund Currency	US Dollars
No. of Holdings	41
Fund Management Fee	1.25 % per annum

Highest and Lowest Unit Price Achieved

Initial (18 April 2016)	1.0000
Highest (6 September 2021)	1.1084
Lowest (16 December 2016)	0.9680
NAVPU – 29 February 2024	1.0732

Risk Classification

The Fund is suitable for investors who take medium- to long-term views. The Fund's yield, net asset value and total return may fluctuate as a result of interest rate and currency movements and the changes in the credit quality of the investments. On redemption of shares, an investor may receive an amount less than the original amount of the investment. Liquidity risk also needs to be taken into account.

BPI – Philam US Dollar Bond Fund 2 Market Commentary

The JP Morgan Asia Credit Index (JACI) Philippines lost 0.12% in February as Philippine dollar-denominated bonds tracked movements in US Treasuries.

Global bonds experienced heightened volatility in February as policy rate cut expectations were tempered amidst higher-than-expected inflation, and strong jobs data. During the month, market participant pushed back their expected timing of the US Federal Reserve's first rate cut from May to June.

In January, US consumer price index (CPI) inflation rose by 3.1%, faster than the 2.9% median estimate. Moreover, the unemployment rate came at 3.7% with wage growth at 4.5% YoY, also higher than expectations. These macroeconomic data reinforce the Fed's decision to keep rates steady and the Fed officials' remarks that it is still too early for policy rate cuts. Consequently, the 10-year US Treasury benchmark yield surged from 3.91% to 4.25% for the month.

On the domestic front, inflation for January fell to 2.8% in January, below the 3.1% median estimate and the 3.9% recorded in December. While headline inflation slowed down with the help of further declines in vegetable prices, it must be noted that rice prices, which accounts for 9% of the consumption basket, went up by 23% year-on-year. Similar to the Fed's stance, the Bangko Sentral ng Pilipinas (BSP) kept policy rates steady with policymakers signalling the need to be vigilant against inflation pressures from costlier food because of El Niño and higher transport and electricity prices.

Risk Warning: Past performance is not indicative of future results. Our investment management services relate to a variety of investments, each of which can fluctuate in value. The value of portfolios we manage may fall as well as rise, and the investor may not get back the full amount originally invested. The investment risks vary between different types of instruments. For example, for investments involving exposure to a currency other than that in which the portfolio is denominated, changes in the rate of exchange may cause the value of investments, and consequently the value of the portfolio, to go up or down. In the case of a higher volatility portfolio the loss on realization or cancellation may be very high (including total loss of investment), as the value of such an investment may fall suddenly and substantially. In making an investment decision, prospective investors must rely on their own examination of the merits and risks involved. **Disclaimer:** Unless otherwise noted, all information contained herein is sourced from BPI AIA* internal data.
