The underlying fund uses optimizing techniques to achieve a similar return to its benchmark index. These techniques may include the strategic selection of certain securities that make up the benchmark index or other securities which provide similar performance to certain constituent securities. Benchmark is S&P 500 Index

BPI-Philam US Equity Fund Market Commentary

In April 2025, global equities showed signs of stabilization following a volatile March. The MSCI All Country World Index (ACWI) posted a modest gain of 0.77% as investor sentiment improved after the U.S. paused new tariffs and political tensions eased. U.S. equities remained under pressure, with the S&P 500 falling 0.76% for the month, extending its year-to-date losses to 5.31%. Technology stocks continued to struggle, while defensive sectors like consumer staples and healthcare outperformed. International markets outperformed the U.S., with European equities posting modest gains—MSCI Europe rose 1.2%, supported by strong performance in Germany and a weaker U.S. dollar. Japanese equities also advanced, with the Nikkei 225 gaining 1.1% as investors responded positively to the Bank of Japan's policy stance and the yen's continued weakness, which benefited exporters. Overall, April marked a shift in investor focus toward international markets, which helped lift global equities despite ongoing macroeconomic uncertainty.

SECTOR BREAKDOWN

Risk Warning: Past performance is not indicative of future results. Our investment management services relate to a variety of investments, each of which can fluctuate in value. The value of portfolios we manage may fall as well as rise, and the investor may not get back the full amount originally invested. The investment risks vary between different types of instruments. For example, for investments involving exposure to a currency other than that in which the portfolio is denominated, changes in the rate of exchange may cause the value of investments, and consequently the value of the portfolio, to go up or down. In the case of a higher volatility portfolio the loss on realization or cancellation may be very high (including total loss of investment), as the value of such an investment may fall suddenly and substantially. In making an investment decision, prospective investors must rely on their own examination of the merits and risks involved. **Disclaimer:** Unless otherwise noted, all information contained herein is sourced from BPI AIA* internal data.
