The underlying fund uses optimizing techniques to achieve a similar return to its benchmark index. These techniques may include the strategic selection of certain securities that make up the benchmark index or other securities which provide similar performance to certain constituent securities. Benchmark is S&P 500 Index

BPI-Philam US Equity Fund Market Commentary

Global equities posted a solid month, with the MSCI All Country World (ACWI) Total Return Index (in USD) rising by 2.11% in October, driven by investor optimism around rate cuts, strong corporate earnings, and sustained AI enthusiasm. The U.S. Federal Reserve cut interest rates by 25 basis points to a target range of 3.75–4.00%, which gave risk assets a boost. This cut marked the second consecutive reduction, as the Fed responded to signs of slowing in the labor market and weaker economic momentum. The Fed also announced the end of its quantitative tightening from December where they will stop shrinking the balance sheet.

European markets advanced moderately. Inflation in the eurozone eased to around 2.1% in October, down 2.2% in September. STOXX All Europe Index rose, helped by gains in autos and luxury goods amid signs of recovering Chinese demand.

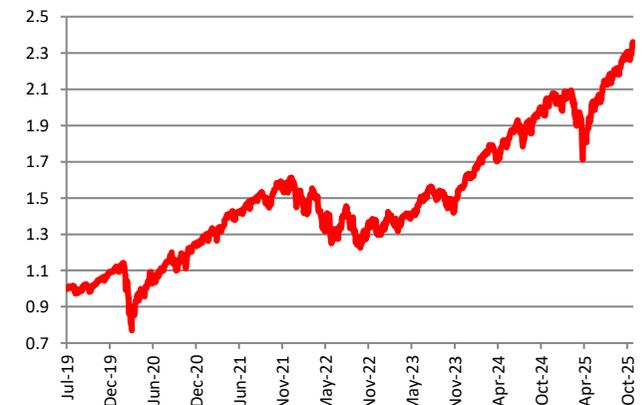

Japan's Nikkei 225 jumped 16%, its strongest month-on-month performance in decades. The rally was underpinned by the election of Sanae Takaichi as leader of the ruling party raising expectations of more expansionary fiscal and monetary policy.

The MSCI ex-Japan Index rose 4.5% in October. Korea and Taiwan benefited from the trade talks with the U.S. Their semiconductor space saw rallies for the month with AI enthusiasm. Signs of easing trade tension between the U.S. and China further supported emerging Asian markets.

Risk Warning: Past performance is not indicative of future results. Our investment management services relate to a variety of investments, each of which can fluctuate in value. The value of portfolios we manage may fall as well as rise, and the investor may not get back the full amount originally invested. The investment risks vary between different types of instruments. For example, for investments involving exposure to a currency other than that in which the portfolio is denominated, changes in the rate of exchange may cause the value of investments, and consequently the value of the portfolio, to go up or down. In the case of a higher volatility portfolio the loss on realization or cancellation may be very high (including total loss of investment), as the value of such an investment may fall suddenly and substantially. In making an investment decision, prospective investors must rely on their own examination of the merits and risks involved. **Disclaimer:** Unless otherwise noted, all information contained herein is sourced from BPI AIA* internal data.
