The underlying fund uses optimizing techniques to achieve a similar return to its benchmark index. These techniques may include the strategic selection of certain securities that make up the benchmark index or other securities which provide similar performance to certain constituent securities. Benchmark is S&P 500 Index

BPI-Philam US Equity Fund Market Commentary

Global equities rallied once more, with the MSCI All Country World Equity Total Return Index up by 3.62% MoM. Sentiment was boosted by the US Federal Reserve's first 25-basis point rate cut for the year, with markets pricing in another two rate cuts before the end of the year. The Fed penciled in another cut each in 2026 and 2027, based on their quarterly rate projections. Meanwhile, US Consumer Price Index came in-line with expectations at 2.9% in August, fueling investors' hopes of a supportive central bank policy moving forward. Softer-than-anticipated labor data releases likewise added to these expectations.

In September, European markets continued their steady climb, with the Euro Stoxx 50 gaining 1.6% in USD terms. The rally was supported by strong performances in energy and financial sectors, while technology and media lagged due to valuation concerns and political instability in France. The index rebalancing reflected a shift toward financial recovery and energy transition, with notable additions like Deutsche Bank and Siemens Energy.

Japan's Nikkei 225 surged 6.2%, reaching a new all-time high. The rally was driven by a weaker yen, robust corporate earnings from tech and manufacturing giants, and increased foreign investment. AI and semiconductor sectors remained key growth drivers, while a finalized U.S.-Japan trade deal boosted investor confidence and export prospects.

Across Asia, markets benefited from easing inflation and dovish central bank signals. China and South Korea saw gains fueled by tech stimulus and strong export data. Globally, investors continued rotating toward non-U.S. equities, favoring regions with monetary support and sectoral momentum, especially in defense, infrastructure, and technology.

Risk Warning: Past performance is not indicative of future results. Our investment management services relate to a variety of investments, each of which can fluctuate in value. The value of portfolios we manage may fall as well as rise, and the investor may not get back the full amount originally invested. The investment risks vary between different types of instruments. For example, for investments involving exposure to a currency other than that in which the portfolio is denominated, changes in the rate of exchange may cause the value of investments, and consequently the value of the portfolio, to go up or down. In the case of a higher volatility portfolio the loss on realization or cancellation may be very high (including total loss of investment), as the value of such an investment may fall suddenly and substantially. In making an investment decision, prospective investors must rely on their own examination of the merits and risks involved. **Disclaimer:** Unless otherwise noted, all information contained herein is sourced from BPI AIA* internal data.
