The Fund may be suitable for investors looking for exposure in the top US Companies in leading industries of the US economy and have an investment horizon of medium to long term. The underlying fund uses optimizing techniques to achieve a similar return to its benchmark index. These techniques may include the strategic selection of certain securities that make up the benchmark index or other securities which provide similar performance to certain constituent securities. Benchmark is S&P 500 Index

BPI-Philam US Equity Fund Market Commentary

Global equities declined modestly in June 2026, as weakness in mega-cap technology and emerging markets offset broader participation in value-oriented and cyclical areas. The AI trade became more bifurcated: semiconductors remained supported by robust demand but were volatile, while hyperscalers and other large-cap technology names came under pressure amid renewed scrutiny of AI capex returns. Value outperformed growth and market leadership broadened, helped by small caps, financials, industrials, and healthcare. Meanwhile, energy prices and progress toward a negotiated settlement with Iran helped temper concerns of energy-driven inflation, tighter central bank policy, and elevated market valuations. The MSCI All Country World Index declined -0.8%, with Japan (+5.63%) and Europe (+2.92%) bucking the trend as energy prices fell with optimism around a US Iran peace deal. Emerging markets (-1.67%) led the decline together with the US (-1.06%) on AI trade unwind as concerns on lofty valuations and overspending spook investors.

Risk Warning: Past performance is not indicative of future results. Our investment management services relate to a variety of investments, each of which can fluctuate in value. The value of portfolios we manage may fall as well as rise, and the investor may not get back the full amount originally invested. The investment risks vary between different types of instruments. For example, for investments involving exposure to a currency other than that in which the portfolio is denominated, changes in the rate of exchange may cause the value of investments, and consequently the value of the portfolio, to go up or down. In the case of a higher volatility portfolio the loss on realization or cancellation may be very high (including total loss of investment), as the value of such an investment may fall suddenly and substantially. In making an investment decision, prospective investors must rely on their own examination of the merits and risks involved. **Disclaimer:** Unless otherwise noted, all information contained herein is sourced from BPI AIA* internal data.
