Risk Classification

The Fund may be suitable for investors looking for exposure in the large and mid-capitalization stocks across developed countries and have an investment horizon of medium to long term. The **underlying fund** uses optimizing techniques to achieve a similar return to its benchmark index. These techniques may include the strategic selection of certain securities that make up the benchmark index or other securities which provide similar performance to certain constituent securities. Benchmark is MSCI World Index

BPI-Philam World Equity Fund

Market Commentary

Global equity markets rose in July. Market sentiment continued to improve on the back of resilient economic data and declining trend of inflation. The Federal Reserve and European Central Bank maintained their hawkish stance and hiked their interest rates by 25 basis points. Expectation for a soft landing in the US has garnered steam as inflation figures seemingly peaked, while the economy continues to be robust. US inflation eased more than market forecasts at an annual rate of 3% in June from 4.0% in May. In terms of growth, the US grew by 2.4% in the second quarter, above consensus estimates of 2.0%. Across regional markets, China has outperformed the broader global and emerging market equity indices as its government announced positive measures to boost its economy, including providing stimulus to improve consumption and support to its real estate sector.

GEOGRAPHIC BREAKDOWN (%)

Geographic exposure relates principally to the domicile of the issuers of the securities held in the product, added together and then expressed as a percentage of the product's total holdings. However, in some instances it can reflect the location where the issuer of the securities carries out much of their business.

Risk Warning: Past performance is not indicative of future results. Our investment management services relate to a variety of investments, each of which can fluctuate in value. The value of portfolios we manage may fall as well as rise, and the investor may not get back the full amount originally invested. The investment risks vary between different types of instruments. For example, for investments involving exposure to a currency other than that in which the portfolio is denominated, changes in the rate of exchange may cause the value of investments, and consequently the value of the portfolio, to go up or down. In the case of a higher volatility portfolio the loss on realization or cancellation may be very high (including total loss of investment), as the value of such an investment may fall suddenly and substantially. In making an investment decision, prospective investors must rely on their own examination of the merits and risks involved. **Disclaimer:** Unless otherwise noted, all information contained herein is sourced from BPI AIA* internal data.
