Highest (04 January 2022)	1.4907
Lowest (23 March 2020)	0.7383
NAVPU – 30 November 2023	1.4141

Risk Classification

The Fund may be suitable for investors looking for exposure in the large and mid-capitalization stocks across developed countries and have an investment horizon of medium to long term. The **underlying fund** uses optimizing techniques to achieve a similar return to its benchmark index. These techniques may include the strategic selection of certain securities that make up the benchmark index or other securities which provide similar performance to certain constituent securities. Benchmark is MSCI World Index

BPI-Philam World Equity Fund

Market Commentary

Global equity markets rebounded in November. The US Federal Reserve kept rates steady for the second consecutive month, driving expectations that the central bank is nearing its peak level for this rate hiking cycle. November delivered mixed economic data for the US. The labor market remained resilient but showed signs of softening, with October unemployment rate rising from 3.8% to 3.9% and nonfarm payrolls posting below expectations at 150,000 jobs added versus the expected 180,000. US inflation also continued its moderation with the October year-on-year CPI at 3.2%. Investor sentiment improved over the past month as yields moved lower driven by peak interest rate expectations amid the declining inflation trend and softening economic data. The shift in sentiment provided support to risk assets and drove global equity markets its highest return since mid-2022. MSCI All Country World returned 9.28% for the month, with developed markets outperforming emerging markets.

GEOGRAPHIC BREAKDOWN (%)

Geographic exposure relates principally to the domicile of the issuers of the securities held in the product, added together and then expressed as a percentage of the product's total holdings. However, in some instances it can reflect the location where the issuer of the securities carries out much of their business.

Risk Warning: Past performance is not indicative of future results. Our investment management services relate to a variety of investments, each of which can fluctuate in value. The value of portfolios we manage may fall as well as rise, and the investor may not get back the full amount originally invested. The investment risks vary between different types of instruments. For example, for investments involving exposure to a currency other than that in which the portfolio is denominated, changes in the rate of exchange may cause the value of investments, and consequently the value of the portfolio, to go up or down. In the case of a higher volatility portfolio the loss on realization or cancellation may be very high (including total loss of investment), as the value of such an investment may fall suddenly and substantially. In making an investment decision, prospective investors must rely on their own examination of the merits and risks involved. **Disclaimer:** Unless otherwise noted, all information contained herein is sourced from BPI AIA* internal data.
